Responsible creative generation.

Being responsible.

Being accountable, reliable, or the cause of an action/event.

What AI is good for?

- Summarising long documents, meeting notes, or email threads
- Drafting emails, updates, and first versions of documents
- Rewriting text to make it clearer, shorter, or more professional
- Brainstorming ideas, titles, questions, or next steps
- Organising rough notes into bullets, sections, or action items
- Adapting content for different audiences, tones, or formats

What AI is not good at

What to watch out for

- It may invent facts, sources, or details
- It can miss context that a person would understand
- It often produces vague or repetitive wording
- It may give answers that sound good but are not actually useful
- It does not know your team, client, or situation unless you explain it
- It should not be trusted without checking the output

How to review AI output

Before you use AI-generated content, take a moment to check that it is clear, correct, and appropriate for work.

- **Accuracy**: Are the facts, names, dates, and details correct?
- **Clarity**: Is the message easy to understand?
- **Tone**: Does it sound professional and appropriate for the audience?
- **Relevance**: Does it actually answer the task you gave it?
- **Specificity**: Is it useful, or does it sound too generic?
- **Confidentiality**: Does it include anything sensitive that should not be shared?

Text generation.

Why Text Is Both the Easiest and Most Underestimated Modality

Almost everyone in a corporate environment already uses AI for text. The problem is that most people use it like a slightly smarter autocomplete — they get "good enough" output and move on. The opportunity here is to shift that mental model: text generation, done well, is a force multiplier.

Briefs

A creative brief is one of the most context-rich documents in any marketing or product workflow. It defines audience, tone, objective, channel, and creative direction. It's also one of the most painful documents to write from scratch, because it requires synthesising information from multiple sources.

The anatomy of a good brief

- **Background**
  The context that makes the work make sense. What's the situation, the problem, or the opportunity? This is where you explain why this brief exists at all..
- **Objective**
  The single, measurable thing the work needs to achieve. If you can't define success, you can't evaluate the output.
- **Audience**
  Who this is actually for. Not just demographics, but mindset: what do they know, what do they care about, and what's standing between them and the desired action?
- **Message**
  The core idea the audience should walk away with. If they remember one thing, what should it be? This is the brief's center of gravity, everything else orbits it.
- **Constraints**
  The non-negotiables. Budget, deadlines, legal requirements, brand guidelines, word counts, things you can't say. Constraints aren't creative obstacles — they're the walls that give the work its shape.

Emails

Email is AI's highest-ROI writing application because it's high-volume and pattern-driven. The goal isn't generating text — it's generating text that sounds intentional and human.

Four things to get right:

- **Register**
  AI defaults to bland corporate neutral. Fix it with specific tone descriptors and context about who's writing to whom.
- **Channel fit**
  Outreach, internal updates, and client notes are different genres with different rules. Each needs its own prompt template.
- **Length**
  AI over-explains by default. Give it hard numerical limits ("max 80 words, one CTA") rather than vague instructions like "keep it short."
- **Subject lines**
  Generate 10 variants, pick the best two, and test them. It takes seconds and meaningfully improves open rates.

Prompt Template for Emails

System:

You are an expert business communicator. Write emails that are direct, human, and specific to the situation.

User:

Write an email with this brief:

Context: [background on the relationship and what the recipient already knows]

Situation: [what happened, what has not happened yet, and any relevant uncertainty]

Goal: [the response or outcome this email should get]

Tone: [how the sender should sound and what attitude to project]

Constraints: [word limit, phrases to avoid, how it should end, and any hard rules]

Write one ready-to-send email.

Images.

Know your audience

Why responsible AI image use matters

Your output = company output

Images made at work represent the organization. Off-brand or inappropriate visuals erode trust with clients and partners in ways personal-use mistakes don't.

Liability is shared

Copyright infringement, defamation, and privacy violations from AI images can expose your employer , not just you personally, legal action.

Most organizations are still catching up

Only a fraction of companies have formal AI image policies. That gap means employees make judgement calls that carry real organizational risk.

4 things to check before using any AI image tool at work

1. Is the tool approved by IT or your AI policy?
2. Who owns the images you generate at work?
3. What data are you allowed to feed into the tool?
4. What approvals are required before publishing?

Checklist before using any AI image tool at work

1. I've confirmed this tool is approved by my organization's IT or AI policy
2. The image has been checked against our brand guidelines
3. I haven't uploaded any confidential data, client photos, or proprietary images
4. If for external use, Legal has reviewed or the license explicitly permits it
5. The image does not depict any real, identifiable person without written consent
6. I've recorded this image as AI-generated in our asset management system
7. I've reviewed the image for unintended logos, trademarks, or branded elements
8. The person publishing this knows it was AI-generated
