endava

AI Native Foundations.

Internship Programme 2026-1

Fredy H Viracachá Pava

Tester engineer

Fredy.viraccacha@endava.com

"

25-year career, 5 Years in Endava (March 2026) I have undertaken various roles involving the coordination of engineers, with a significant portion of my time devoted to quality control and software testing, data processing, and training. I have had the opportunity to work in multiple countries globally, which has enriched my experience in managing and supervising professionals. My guiding principle has always been to cultivate strong relationships with clients and colleagues, engaging with them daily, striving for optimal technical outcomes.

Agenda

01 The "AI-Native" Manifesto at Endava

02 AI vs. ML vs. DL

03 Generative vs. Non-Generative (Discriminative)

04 Capabilities, Limitations, and the "I Don't Know“

05 Conclusion & Call to Action

Chapter

01 The "AI-Native" Manifesto at Endava

- **What does AI-Native mean at Endava**

Key Pillars:

Augmented Intelligence: Human + AI > AI alone.

Efficiency: Automating the mundane to focus on the creative.

The Editor-in-Chief Mindset: From "Doer" to "Architect".

Chapter

01 The "AI-Native" Manifesto at Endava

- **The Paradigm Shift**

Traditional Programming: Input + Rules = Output (Deterministic).

AI Paradigm: Input + Output = Patterns/Rules (Probabilistic).

Chapter

01 The "AI-Native" Manifesto at Endava

- **How have you used AI in the last 48 hours?**

AI won't take your job, but a professional using AI will

We make the world simpler, with technology.

Chapter

02 AI vs. ML vs. DL

- **The AI Umbrella**

AI: Machines mimicking human cognitive functions.

ML: Algorithms that learn from data patterns.

DL: Neural networks inspired by the human brain.

02 AI vs. ML vs. DL

- **Machine Learning: Learning from Experience**

Types of ML:

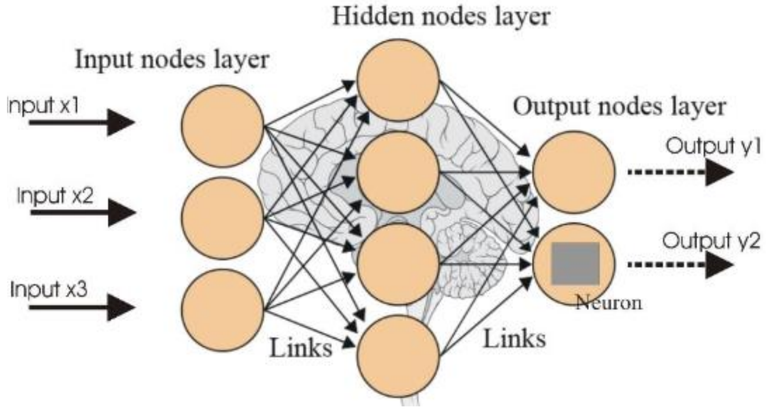
Supervised: *Learning with labels (Input -> Output).*

Unsupervised: *Finding hidden structures (Clustering).*

Reinforcement: *Learning through rewards (Trial & Error).*

02 AI vs. ML vs. DL

- ***Deep Learning: The Engine of Modern AI***



Feature Extraction (The model decides what's important).

Come for coffee.

•Generative: "The Creator" – Synthesizes, generates, and imagines.

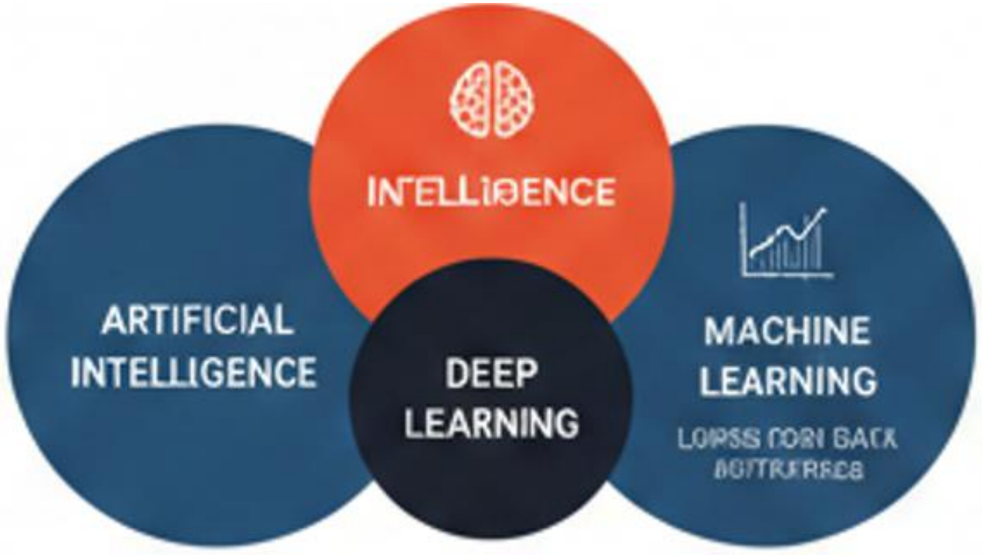
Chapter

03 Generative vs. Non-Generative AI

- ***Two Sides of the Same Coin***

Non-Generative: "The Judge" – Classifies, predicts, and analyzes.

Generative: "The Creator" – Synthesizes, generates, and imagines.



•Generative: "The Creator" – Synthesizes, generates, and imagines.

Chapter

03 Generative vs. Non-Generative AI

- ***Generative AI & The Transformer Architecture***

Core Concept: Self-Attention (Understanding context).

Mechanism: Predicting the next token in a sequence.

•Generative: "The Creator" – Synthesizes, generates, and imagines.

Chapter

04 Capabilities, Limitations, & The "I Don't Know"

The Illusion of Knowledge - The Stochastic Parrot

- *Probability vs. Truth.*
- *LLMs predict the next token, they don't "know" facts.*

•*Generative: "The Creator" – Synthesizes, generates, and imagines.*

Chapter

04 Capabilities, Limitations, & The "I Don't Know"

Hallucinations and the "I Don't Know" Problem

- *The Problem: Models are trained to be helpful, not to be silent.*
- *Risk: Confident incorrectness.*
- *The Challenge: AI struggles to say "I don't know".*

•Generative: "The Creator" – Synthesizes, generates, and imagines.

Chapter

04 Capabilities, Limitations, & The "I Don't Know"

Mitigating Risks (The Endava Way)

RAG: Retrieval-Augmented Generation.

Data Privacy: Protecting Client Intellectual Property.

Rule: Never share PII (Personally Identifiable Information) or Client Code.

•*Generative: "The Creator" – Synthesizes, generates, and imagines.*

Chapter

04 Conclusions & QA

AI is your "Co-Pilot," but you are the "Pilot in Command."
