Quality Engineering Foundations Introduction to Software Testing.

Internship Programme 2026-1

Fredy H Viracachá Pava

Tester engineer

Fredy.viraccacha@endava.com

"

25-year career, 5 Years in Endava (March 2026) I have undertaken various roles involving the coordination of engineers, with a significant portion of my time devoted to quality control and software testing, data processing, and training. I have had the opportunity to work in multiple countries globally, which has enriched my experience in managing and supervising professionals. My guiding principle has always been to cultivate strong relationships with clients and colleagues, engaging with them daily, striving for optimal technical outcomes.

Agenda

01 The New Quality Frontier - The Evolution of Quality

02 The Endava Adoption Model . Quality Engineering in Endava

03 The 7 Testing Principles. AI Testing Principles

04 AI-Powered Risk Analysis

05 Testing Levels (The QE Pyramid)

06 Testing Types

07 Testing Methods

08 The Role of Each Discipline in Quality

09 The AI Testing Toolkit

10 Quality Metrics 2.0

11 The Human-in-the-Loop (HITL)

12 The Holistic Team Impact

Chapter

05 Testing Levels (The QE Pyramid)

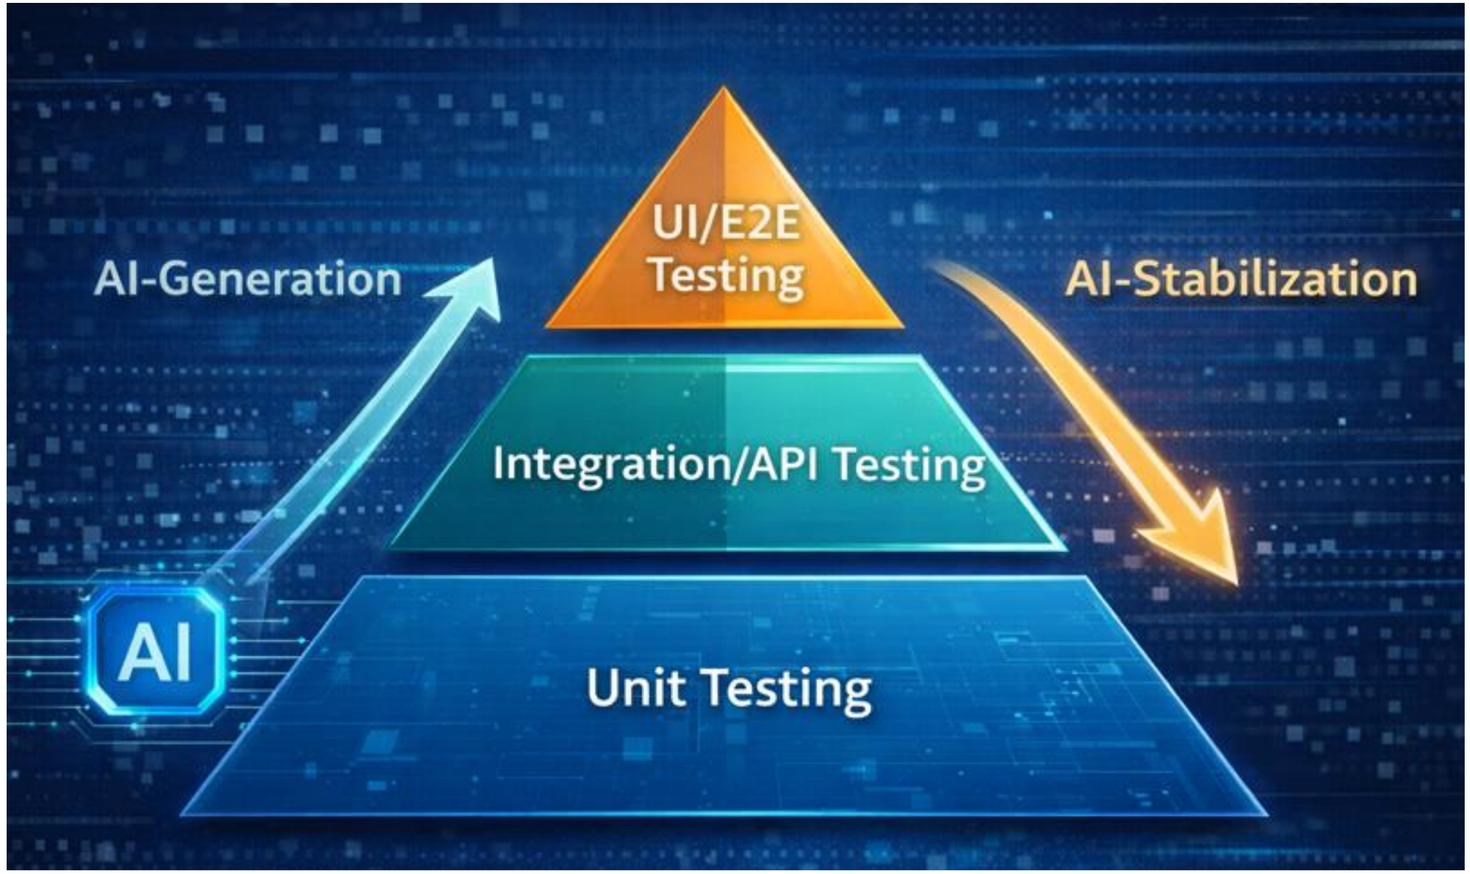

Image created by AI-ChatGPT Supervision Fredy Viracachá

•Generative: "The Creator" – Synthesizes, generates, and imagines.

Chapter

06 Testing Types

Functional Testing (The "What")

Unit Testing: Individual components.

Integration: Interaction between modules.

Regression: Checking that new code didn't break old features.

Acceptance (UAT): Meeting business needs.

Non-Functional Testing (The "How")

Performance: Speed and stability.

Security: Vulnerabilities and data protection.

Usability: User experience and accessibility.

Scalability: Handling growth.

•Generative: "The Creator" – Synthesizes, generates, and imagines.

Chapter

07 Testing Methods

Chapter

08 The Role of Each Discipline in Quality

Image created by AI-ChatGPT Supervision Fredy Viracachá

•Generative: "The Creator" – Synthesizes, generates, and imagines.

Chapter

09 The AI Testing Toolkit

Category	Function	Specific Tools
Generative AI	Creation of scripts, data, and documentation.	GitHub Copilot, ChatGPT, Tabnine.
Visual AI	UI validation through computer vision.	Applitools, Percy.
Self-Healing	Automatic maintenance of broken test scripts.	Mabl, Testim.io, Healenium.

** ALWAYS ask for the permission and use licensed tool

•Generative: "The Creator" – Synthesizes, generates, and imagines.

Chapter

10

Quality Metrics 2.0

Traditional Metrics (The Past)	QE Metrics 2.0 (The Future)
Number of Bugs Found	MTTD (Mean Time to Detect)
Test Case Execution %	Risk Coverage (Business Impact)
Passed vs. Failed Tests	Test Flakiness Ratio (Reliability)
Manual Effort Hours	AI Efficiency Gain (Velocity)
